

STEEL CITY RE

Forging Reputation Resilience

Reputation Assurance: Why, How, and What

Problem: Reputation risk is a material peril of economic harm from angry disappointed stakeholders.

Why Deploy a Solution?

Reputation is a product of social, political and economic factors. Reputation is a vital asset of a firm, which boards have a duty to protect. Reputation risk management and financing can reduce:

- ▶ the frequency, duration and economic impact of an adverse event and the ensuing negative media;
- ▶ a board's exposure to shareholder derivative suit liability;
- ▶ a company's cost of capital.

How is it Delivered?

Reputation risk is a complex peril arising from unmet expectations amplified by various media. Steel City Re's comprehensive risk management solution exploits prior successful socially-impactful strategies famously offered by the *Hartford Steam Boiler Inspection and Insurance Company*, the *Federal Deposit Insurance Corporation*, and the *Prussian Railway Act of 1838*. A key feature is that risk transfer is available only on a qualified basis.

The inspection/advisory services comprise (i) a focused review of reputation risk arising from operational failures; (ii) reputation risk mitigation

strategies, and (iii) reputation risk management plans.

The deliverable is an enterprise reputation risk management roadmap and quantified risks.

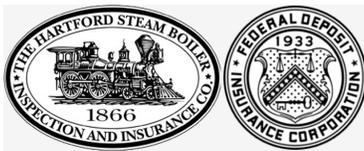

Risk transfer policies provide coverage led by the Lloyd's syndicate, Tokio Marine Kiln. Larger limits may be covered through capital instruments. Additional risk financing also may be structured through a captive insurance vehicle. All risk financing and transfer policies are triggered parametrically.

What is in a Solution?

Steel City Re's solutions are based on proprietary reputation risk and value quantification models. The reputation risk model is compatible with COSO 2017. Steel City Re's synthetic quantitative measures of reputational value are used by Wall Street for equities arbitrage strategies, Lloyd's for parametric risk transfer; and others for better insurance captive compliance.
